Eduard Navarro

Meet the candidates, week 13: "How can District 3 help the city hit its housing goals?"

I know how to integrate 82,000 homes into our city without them even being noticeable. This ranges from planning street layouts to optimizing IRR to make market rate and affordable housing attractive for investment.

In District 3, we can deliver our share based on either our population (9%) or our land area (4%), which may be more equitable.

Paris, not known for tall buildings but denser and with less land than SF, remains vibrant and livable for all income levels. We can enhance our city's density, charm, affordability, and economic returns without building blunders. I am uniquely qualified and have the vision to lead this effort; to ensure we can and should have it all.
