

If I am elected to the board of supervisors, one of my first proposals will be to add extra garbage cans. In contrast to earlier attempts, I want the garbage cans to be cost-effective, long-lasting, and reliable. There is no reason to spend \$10,000 on a single trash can. My garbage cans will be double-bin trash cans, with one side designated for landfills and the other for plastic and aluminum recycling. I want them at every Muni station, near parks and schools, and in commerce areas, restaurants, and bars. I feel that everyone wants a clean street, but the city does not provide us with the resources to make it happen on an individual level. Maybe add a design contest for our High school students to participate in.
